For immediate release

November 1, 2014

DALLAS, TEXAS

KFS LOS ANGELES FACILITY NOW A CUSTOMS BONDED CONTAINER FREIGHT STATION (CFS).

CFS status allows for more service options for importers throughout Canada, Mexico and the United States.

KFS, Inc., based in Dallas, TX, is proud to announce that their Carson, CA, facility is now a bonded Container Freight Station (CFS) and is offering transload, gateway and transportation services.

The CFS will receive consolidated cargo arriving in Southern California by air or sea and will transload and reconsolidate for clients for movement elsewhere in the United States. KFS is excited because one of the key beneficiaries of this service will be their El Paso, TX, office, allowing cargo to transit the United States and be exported to Mexico without payment of duties or taxes.

“Our CFS station offers our customers a way to control their costs and improve the transit times of products to their final destination,” says Steve McDaniel, Senior Vice President, Global Business Development. “We offer hundreds of routing options through our own domestic forwarding department that a standard CFS is unable to provide. Our customers can get their products to market faster and more effectively with our enhanced routing and tracking systems.”

KFS encourages people to visit their website at kfsinc.com. Here they can learn more about their services, track cargo, request a quote and connect and follow their social media channels for KFS news and stories and links to information that impacts domestic transportation, warehousing and third party logistics and international freight forwarding and Customs brokerage.
